-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 30 September 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-46 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-46 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

This is the initial Office action based on the 10/676,386 application filed on 09/30/2003. Claims 1-46, as originally filled, are currently pending and have been considered below.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-46 are rejected under 35 U.S.C. 102(e) as being anticipated by Weller et al. (hereinafter Weller) U.S. Patent No.: 7,149,797 B1.

Weller teaches:

Claim 26: A method of distributing streaming data in a wide area network having an overlay network of proxy servers comprising predicting a rate of logon of users for access to a data stream from a data source (Figures 1-7 and Col. 13 lines 13-34; overlay network, streaming media, load balancing and dynamic monitoring of systems status); activating proxy servers to form a hierarchical structure comprising multiple tiers of proxy servers with respect to the data stream, said activating comprising activating a plurality of proxy servers in a tier as a server farm (Figures 1-7 and Col. 13 lines 13-34; overlay network, streaming

media, set reflectors and CDNs); and distributing users logging on to the proxy servers of said server farm so as to balance data loads of such proxy servers(Figures 1-7 and Col. 13 lines 13-34; integrated traffic management, load balancing, content distribution/management, and dynamic monitoring of systems status); and dynamically reconfiguring said hierarchical structure of proxy servers as users change (Figures 1-7 and Col. 13 lines 13-34; integrated traffic management, load balancing, content distribution/management, and dynamic monitoring of systems status).

Claim 27: Wherein said distributing users comprises distributing users to proxy servers of said server farm in a round-robin manner(Figures 1-7 and Col. 13 lines 13-34; integrated traffic management, load balancing, content distribution/management, and dynamic monitoring of systems status).

Claim 28: Wherein said dynamically reconfiguring said hierarchical structure comprises automatically reconfiguring said hierarchical structure as users change to maintain a predetermined network operating condition (Figures 1-7 and Col. 1 lines 55-61 & Col. 13 lines 13-34 & Col. 7 line 51- Col. 8 line 13; integrated traffic management, load balancing, content distribution/management, and dynamic monitoring of systems status and SLA monitoring).

Claim 29: Wherein said automatically reconfiguring comprises automatically reconfiguring the hierarchical structure to minimize network bandwidth to provide said data stream to said users (Figures 1-7 and Col. 2 lines 51-65; integrated traffic management, load balancing, content distribution/management, and

bandwidth along with network capacity).

Claim 30: Wherein said dynamically reconfiguring comprises deactivating one or more proxy servers and consolidating data loads at an active proxy server as users log off (Figures 1-7 and Col. 13 lines 13-34; integrated traffic management, load balancing, content distribution/management, and dynamic monitoring of systems status).

Claim 31: Further comprising consolidating a data load from a proxy server being deactivated by forming a redundant data path to said active proxy server before deactivation of such proxy server being deactivated (Figures 1-7 and Col. 5 lines 6-14; integrated traffic management, load balancing, content distribution/management, and multiple redundant paths).

Claim 32: Wherein each proxy server receives data in blocks, said redundant data path providing one or more blocks of redundant data, and wherein the method comprises discarding redundant blocks of data at said active proxy server (Figures 1-7 and Col. 5 lines 6-14; integrated traffic management, load balancing, content distribution/management, and multiple redundant paths).

Claim 33: Wherein said activating and reconfiguring are performed by a proxy network coordinator (Figures 1-7 and Col. 3 lines 13-34 & Col. 5 lines 6-14; integrated traffic management, network intelligence, CDN Managed services and connection manager).

Claim 34: Wherein said proxy network coordinator comprises a centralized server (Figures 1-7 and Col. 3 lines 13-34 & Col. 5 lines 6-14; integrated traffic

management, network intelligence, origin server and content server).

Claim 35: Wherein said proxy network coordinator comprises a distributed server (Figures 1-7 and Col. 3 lines 13-34 & Col. 5 lines 6-14; integrated traffic management, network intelligence, origin server and content server).

Claim 36: Further comprising receiving a distribute message from a proxy server requesting distribution of data loads to such proxy server when such data loads reach a predetermined threshold (Figures 1-7 and Col. 1 lines 55-61 & Col. 13 lines 13-34 & Col. 7 line 51- Col. 8 line 13; integrated traffic management, load balancing, content distribution/management, and dynamic monitoring of systems status, Quality of server and SLA).

Claim 37: Wherein said proxy network coordinator receives said distribute message and reconfigures said hierarchical structure to distribute said data loads (Figures 1-7 and Col. 1 lines 55-61 & Col. 13 lines 13-34 & Col. 7 line 51- Col. 8 line 13; integrated traffic management, load balancing, content distribution/management, and dynamic monitoring of systems status, Quality of server and SLA).

Claim 38: Further comprising receiving a consolidate message from a proxy server requesting consolidation of data loads upon data loads to such proxy server dropping to a predetermined threshold (Figures 1-7 and Col. 1 lines 55-61 & Col. 13 lines 13-34 & Col. 7 line 51- Col. 8 line 13; integrated traffic management, load balancing, content distribution/management, and dynamic monitoring of systems status, Quality of server and SLA).

Claim 39: Wherein said proxy network coordinator receives said consolidate message and reconfigures said hierarchical structure to consolidate data loads (Figures 1-7 and Col. 1 lines 55-61 & Col. 13 lines 13-34 & Col. 7 line 51- Col. 8 line 13; integrated traffic management, load balancing, content distribution/management, and dynamic monitoring of systems status, Quality of server and SLA).

Claim 40: Wherein said activating further comprises activating numbers of proxy servers and tiers to provide a predetermined network operating condition (Figures 1-7 and Col. 1 lines 55-61 & Col. 13 lines 13-34 & Col. 7 line 51- Col. 8 line 13; integrated traffic management, load balancing, content distribution/management, and dynamic monitoring of systems status, Quality of server and SLA).

Claim 41: Wherein said predetermined network operating condition comprises reduced network congestion (Figures 1-7 and Col. 1 lines 55-61 & Col. 13 lines 13-34 & Col. 7 line 51- Col. 8 line 13; integrated traffic management, load balancing, content distribution/management, and dynamic monitoring of systems status, Quality of server and SLA).

Claim 42: Wherein said predetermined network operating condition comprises minimum network bandwidth to provide said data stream to users (Figures 1-7 and Col. 2 lines 51-65; integrated traffic management, load balancing, content distribution/management, and bandwidth along with network capacity).

Claim 43: Wherein said users have a population and a distribution relative to the proxy servers of said overlay network, and said activating comprises activating proxy servers according to said population and distribution of users (Figures 1-7 and Col. 1 lines 55-61 & Col. 13 lines 13-34 & Col. 7 line 51- Col. 8 line 13; integrated traffic management, load balancing, content distribution/management, and dynamic monitoring of systems status, Quality of server and SLA).

Claim 44: Further comprising predicting an expected population and distribution of users for a predetermined period of time, and forming said hierarchical structure in anticipation of data loads of said population and distribution (Figures 1-7 and Col. 1 lines 55-61 & Col. 13 lines 13-34 & Col. 7 line 51- Col. 8 line 13; integrated traffic management, load balancing, content distribution/management, and dynamic monitoring of systems status, Quality of server and SLA).

Claim 45: Further comprising activating proxy servers to form another hierarchical structure comprising multiple tiers of proxy servers with respect to another data stream to distribute said other data stream to another plurality of users, said other hierarchical structure sharing one or more proxy servers with said first-mentioned hierarchical structure (Figures 1-7 and Col. 13 lines 13-34; integrated traffic management, load balancing, content distribution/management, and dynamic monitoring of systems status).

Claim 46: Further comprising dynamically reconfiguring said other hierarchical structure as said other users change, said other hierarchical structure being dynamically reconfigured independent of said first-mentioned hierarchical

structure (Figures 1-7 and Col. 13 lines 13-34; integrated traffic management, load balancing, content distribution/management, and dynamic monitoring of systems status).

Claims 1-25 list all the same elements as **claims 26-46** and are therefore rejected using the same rationale as **claims 26-46**. Furthermore, with regards to **claim 23** the limitation of a *double exponential prediction method* is well known in the art as is apparent under Thangavelu et al. (Thangavelu) U.S. Patent No.: 5,168,136 (Col. 5 lines 7-17).

Examiner Note: Examiner has cited particular columns and line numbers in the references as applied to the claims above for the convenience of the applicant. Although the specified citations are representative of the teachings of the art and are applied to the specific limitations within the individual claim, other passages and figures may apply as well. It is respectfully requested from the applicant in preparing responses, to fully consider the references in its entirety as potentially teaching of all or part of the claimed invention, as well as the context of the passage as taught by the prior art or disclosed by the examiner.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Maceeh Anwari whose telephone number is 571-272-7591. The examiner can normally be reached on Monday-Friday 7:30-5:00 PM ES.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, William Vaughn can be reached on 571-272-3922. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
